Conceptual Design of a 500 GeV Electron Positron Linear Collider with Integrated X-Ray Laser Facility

TESLA and SBLC Collaborations

December 1996

Contents

Executive Summary 1
Author List 1

1 High Energy Physics **6**

2 Detector **7**

3 TESLA Superconducting Linear Collider **8**

3.1 Overview (Brinkmann) 9
3.1.1 TESLA concept 9
3.1.2 Luminosity and Machine Parameters 9
3.1.3 Energy Upgrade 9
3.2 Linear Accelerator Technology 9
3.2.1 Accelerating Structures (Proch, Schmüser) 9
3.2.1.1 Superconducting Cavity Design 9
3.2.1.2 Fabrication and Processing Techniques 9
3.2.1.3 Input Coupler 9
3.2.1.4 Higher Order Mode Damping 9
3.2.1.5 Lorentz-Force and Microphonics 9
3.2.1.6 Magnetic Shielding 9
3.2.2 The Module (Pagani, Wolff) 9
3.2.2.1 Cryostat 9
3.2.2.2 Assembly 9
3.2.2.3 Quadrupole and Correction Magnets 9
3.2.2.4 Supports and Alignment 9
3.2.3 Vacuum System (Zapfe-Düren) 9
3.2.4 Radiofrequency System (Gamp) 9
3.2.4.1 Klystron 9
3.2.4.2 Conventional Modulator 9
3.2.4.3 SMES Modulator 9
3.2.4.4 Pulse Power Distribution 9
3.2.4.5 Low-Level rf-System 9
3.2.5 Cryogenics (Horlitz, Wolff) 9
3.2.5.1 Overview of Cryogenic Load 9

3.2.5.2 Cryogenic Plant 9
3.2.5.3 Helium Distribution and Subsystems 9
3.2.6 Failure Handling (Weise) 9
3.2.7 Integrated System Test (TTF) (Aune) 9
3.3 Beam Dynamics (Mosnier) 9
3.3.1 Introduction 9
3.3.2 Beam Optics 9
3.3.3 Emittance Preservation 9
3.3.3.1 Single Bunch Effects 9
3.3.3.2 Multi Bunch Effects 9
3.3.4 Orbit Stability 9
3.3.5 Summary Tolerances and Emittance Dilution 9
3.4 Injection System (N.N.) 9
3.4.1 Introduction 9
3.4.2 Electron Source 9
3.4.2.1 Low-Emittance Flat Beam RF-Laser Gun (Rosenzweig) 9
3.4.2.2 Polarized Gun (S. Schreiber) 9
3.4.2.3 Injector and Pre-accelerator (Garvey) 9
3.4.3 Positron Source (Flöttmann) 9
3.4.3.1 Spent Beam Capture System (Glantz) 9
3.4.3.2 Wiggler and Undulator Design (S. Wipf) . . . 9
3.4.3.3 Target Layout 9
3.4.3.4 Injector and Pre-accelerator 9
3.4.3.5 Beam Transport Line 9
3.5 Damping Ring (Brinkmann, Shiltsev) 9
3.5.1 Introduction 9
3.5.2 General Layout and Lattice 9
3.5.2.1 Beam Optics 9
3.5.2.2 Wigglers 9
3.5.2.3 Tolerances and Correction Procedures 9
3.5.2.4 Dynamic Acceptance 9
3.5.3 Injection and Extraction System (Grishanov, Rümmler) . . 9
3.5.4 Rf-System 9
3.5.5 Vacuum System 9
3.5.6 Collective Effects and Feedback Systems 9
3.6 Bunch Compressor (designed by P. Emma) 9
3.7 Beam Delivery System (Napoly) 9
3.7.1 Introduction 9
3.7.2 Magnet Lattice and Optics 9
3.7.3 Sensitivity to Errors 9
3.7.4 Tuning and Initial Alignment and Strengths Tolerances (Walker) 9

3.7.5 Ground Motion (Sery) 9
3.7.6 Orbit and Spotsize Stabilisation (Walker) 9
3.7.7 Interaction Region and Beam-Beam Interaction (Schulte) 9
3.7.8 Collimation System (Drozhdin, Brinkmann) 9
3.7.9 Muon Background (Sachwitz, J. Schreiber) 9
3.7.10 Spent Beam Extraction and Beam Dump (Drozhdin, Schmitz, Maslov) 9
3.8 Instrumentation and Controls (Mess) 9
3.8.1 Beam Diagnostics 9
3.8.1.1 Beam Position Monitors (J. Schreiber, Wendt) 9
3.8.1.2 Transverse Beam Size Monitors (Voss, Walker) 9
3.8.1.3 IP Beam Size Monitor 9
3.8.1.4 Bunch Length Monitors (Hanke) 9
3.8.1.5 Bunch Charge Monitors 9
3.8.2 Fast Orbit Feedback (Henke, Lorenz) 9
3.8.3 Timing System (Kriens) 9
3.8.4 Polarimeters 9
3.8.5 Control System (Rehlich) 9
3.9 Infrastructure (Bialowons, Jensen) 9
3.9.1 Power Distribution 9
3.9.2 Water Cooling (Ullrich) 9
3.9.3 Air Conditioning 9
3.10 Civil Engineering (Bialowons, Engelke, Sinram, WTM) 9
3.10.1 Tunnel Layout 9
3.10.2 Experimental Hall and Cryogenics Halls 9
3.10.3 Considerations Specific to DESY Site 9
3.10.4 Considerations Specific to FNAL Site (H. Edwards) . . 9
3.11 Radiation Safety (Dinter, Tesch) 9

4 S-Band Linear Collider **10**
4.1 Overview (Holtkamp, Voss) 11
4.1.1 S-Band concept 11
4.1.2 Luminosity and Machine Parameters (Brinkmann) . . . 11
4.1.3 Stages of Operation and Energy Upgrade 11
4.2 SBLC Linac Technology (Holtkamp) 11
4.2.1 Accelerating Structures 11
4.2.1.1 Structure Design (Weiland) 11
4.2.1.2 Structure Fabrication (Kouptsidis, Hartwig) . 11
4.2.1.3 Input Coupler (Dohlus & MPhEI) 11
4.2.1.4 Higher Order Mode Damping (Dohlus) 11
4.2.2 Temperature Stabilisation (Ullrich) 11
4.2.3 Supports (Kaiser) 11
4.2.4 Alignment and Movers (Settles) 11

4.2.5 Vacuum System (Kouptsidis, Hartwig) 11
4.2.6 Radiofrequency System (Bieler, Choroba) 11
4.2.6.1 Klystron 11
4.2.6.2 Conventional Modulator 11
4.2.6.3 Alternative Switch Tube Modulator 11
4.2.6.4 Rf Drive system (Jöstingmeier) 11
4.2.6.5 Beam Loading Compensation (Jöstingmeier) . 11
4.2.6.6 SLED Pulse Compressor Option (Jöstingmeier) . 11
4.2.7 Quadrupoles and Correction Magnets (Wümpelmann) . 11
4.2.8 Active Stabilisation of Supports (Montag) 11
4.2.9 Failure Handling (Voss) 11
4.3 Beam Dynamics (Wanzenberg) 11
4.3.1 Introduction 11
4.3.2 Beam Optics 11
4.3.3 Emittance Preservation 11
4.3.3.1 Single Bunch Effects 11
4.3.3.2 Multi Bunch Effects 11
4.3.4 Orbit Stability 11
4.3.5 Summary Tolerances and Emittance Dilution 11
4.4 Injection System (N.N.) 11
4.4.1 Introduction 11
4.4.2 Electron Source 11
4.4.2.1 Thermionic Gun (?) 11
4.4.2.2 Polarized Gun (S. Schreiber) 11
4.4.2.3 Injector and Pre-accelerator (M. Schmitz) . . 11
4.4.3 Positron Source Flöttmann 11
4.4.3.1 Spent Beam Capture System (Glantz) 11
4.4.3.2 Wiggler and Undulator Design (S. Wipf) . . . 11
4.4.3.3 Target Layout 11
4.4.3.4 Injector and Pre-accelerator 11
4.4.3.5 Beam Transport Line 11
4.5 Damping Ring (Brinkmann) 11
4.5.1 Introduction 11
4.5.2 General Layout and Lattice (Einfeld) 11
4.5.2.1 Beam Optics 11
4.5.2.2 Wigglers 11
4.5.2.3 Tolerances and Correction Procedures 11
4.5.2.4 Dynamic Acceptance 11
4.5.3 Injection and Extraction System 11
4.5.4 Rf-System 11
4.5.5 Vacuum System 11
4.5.6 Collective Effects and Feedback Systems 11
4.6 Bunch Compressor and Spin Rotator (designed by P. Emma) . 11

4.7 Beam Delivery System (same as TESLA BDS group) 11
4.7.1 Introduction 11
4.7.2 Magnet Lattice and Optics 11
4.7.3 Sensitivity to Errors 11
4.7.4 Tuning and Initial Alignment and Strengths Tolerances . . 11
4.7.5 Ground Motion 11
4.7.6 Orbit and Spotsize Stabilisation 11
4.7.7 Interaction Region and Beam-Beam Interaction 11
4.7.8 Collimation System 11
4.7.9 Muon Background 11
4.7.10 Spent Beam Dump 11
4.8 Instrumentation and Controls (same as TESLA Instr. & Contr. group) 11
4.8.1 Beam Diagnostics 11
4.8.1.1 Beam Position Monitors 11
4.8.1.2 Transverse Beam Size Monitors 11
4.8.1.3 Bunch Length Monitors 11
4.8.1.4 Bunch Charge Monitors 11
4.8.2 Fast Orbit Feedback 11
4.8.3 Timing System 11
4.8.4 Polarimeters 11
4.8.5 Control System 11
4.9 Infrastructure (same as for TESLA) 11
4.9.1 Power Distribution 11
4.9.2 Water Cooling 11
4.9.3 Air Conditioning 11
4.10 Civil Engineering (same as for TESLA) 11
4.10.1 Tunnel Layout 11
4.10.2 Experimental Hall 11
4.10.3 Considerations Specific to DESY Site 11
4.11 Radiation Safety (Dinter, Tesch) 11

5 Free Electron Laser Facility (Materlik, Roßbach) 12

A Nuclear Physics Facility 13

B Linac-Ring e/p Collider (optional) 14
